 Lisa Otipoby Whetzel, our Chief Executive Officer (CEO), is a member of the Comanche Nation. She started WTI in September 2001 as a woman, Native American owned HUBZone certified small business. Our initial business base was commercial telecommunications.

In 2002 we operated a commercial telephone and internet service provider company and provided wireless internet to small businesses in two North Carolina cities. Our initial government contracts were for county governments to develop, install, and maintain the software and computing infrastructure to digitize and manage medical records. We also moved into the federal government contracting domain winning contracts to provide systems engineering services for a national intelligence agency and database management services for the Defense Threat Reduction Agency (DTRA), work that continues to this day.

2003 was a year of change and transformation. We changed from mostly commercial work to federal government work and transformed ourselves from telecommunications to systems engineering and integration for C4ISR systems. We also moved our corporate headquarters from North Carolina to Ponca City, Oklahoma. 2003 was a profitable year for WTI.

In 2004 we built on the successes of 2003, bid and won a number of new contracts, and expanded our work force. We also opened two offices; our corporate headquarters in Ponca City, OK and a satellite office in Chantilly, VA.

WTI has been on a fast growth curve since we were first incorporated. In 2002 we had revenues of \$400,000. We closed out 2003 with over \$4 million, or 1000% growth. At this writing, our projections for 2004 revenues are \$7,500,000 or 188% growth. WTI's future is very exciting.
