Since founding Wave Technologies in 2001, we have developed C4ISR systems engineering and integration, IT, and related services contracts with both government and commercial clients, established a complete internet service provider (ISP) and telecommunications subsidiary which is a licensed Competitive Local Exchange Carrier (CLEC) and IntereXchange Carrier (IXC), and developed a patented product line of field services and disaster recovery/continuity of operations networking support tools.

We developed core competencies in:

- * C4ISR systems engineering and integration
- * Systems Engineering and Technical Assistance (SETA) support
- * Unmanned Aerial Vehicle (UAV) planning, testing, evaluation and support
- * Technology insertion, planning, and integration
- * Software development
- * Deployable network solutions including wireless internet services
- * Signals analysis
- * Program and financial management
- * Telecommunications engineering
- * Full internet service provider including web site design and development
- * Medical, financial, and general record document conversion and management

Wave Technologies holds prime contracts with the Army Research Laboratory, Department of Interior (GovWorks), and the General Services Administration. We have subcontracting relationships with AT&T, Computer Sciences Corporation, Lockheed-Martin, SAIC, and the Titan Corporation. The Defense Security Service (DSS) has awarded Wave Technologies a top secret facility security clearance.
